

Sub C
B1
This is a continuation of reissue application serial no. 08/861,457 filed on May 22, 1997,
which has issued as U.S. Patent No. RE37,867. Application serial no. 09/824,736, filed on April
4, 2001, is also a continuation of reissue application serial no. 08/861,457. Application serial no.
09/871,813, filed on June 4, 2001, is also a continuation of reissue application serial no.
08/861,457. Application serial no. 09/956,806, filed on September 21, 2001, is also a
continuation of reissue application serial no. 08/861,457.

B2
Please replace the paragraph beginning column 3, line 31 with the following:

Fig. 1d [11d] is a vertical cross section of an overshot-type tool used in case 1.
1, 371, 173

IN THE CLAIMS:

Please cancel ~~claims 8-10 and 14~~ and amend claims 11 and 13 as follows:

B3
6 ~~11~~ 11. (Amended) A method of sealing the intersection between a first borehole and a
second borehole extending from said first borehole comprising the steps of:

running into the first borehole an assembly comprising a housing and a tubular member
within said housing, said housing having a window and said tubular member including a flange
at an uphole end thereof, said flange being of larger dimension than said window;

maintaining said tubular member substantially within said housing during run in; and
aligning said window of said housing with a position where the second borehole is to be
formed and moving said tubular member from the run in position to a deployed position wherein
a portion of said tubular member extends through said window and outward of said housing and
wherein said flange is mated against the periphery of said window;

drilling the second borehole through the window of the housing.

9 ~~12~~ 12. The method of claim ~~11~~ ⁷⁹ wherein said flange includes an elastomeric sealing
element.
